## The Rockery

### A Selective List of Hardy Rock Garden Plants

The establishment of a Rock Garden, whether it be large, small or only a tiny plot is not a casual undertaking, if it is to be a success, any more than the reproduction of any other form of natural beauty, nor does it require such a great knowledge of Rock Plants or a great amount of money. A most attractive Rockery may be started almost entirely with wildlings and this naturally leads to an intense desire to know more of this type of plant. Thus the Rock Garden grows, intriguing us into an almost complete abandonment of ordinary gardening.

Rock gardening is not a fad, for the simple reason that the nature of these plants, the manner in which they thrive in the hot sun, on rocks, in sand, in the wall crevices, or soil or moss, the infinite variety and the strangeness of their minute form, holds one with an irresistible appeal. Yet the call of all growing things is strong, and all forms of gardening, the Annuals, the Perennials, and the Alpines go hand in hand.

The list herein offered is a selection of such plants as have been perfectly hardy in the vicinity of the Berkshire Hills, through four Winters, making an astonishing development. And this, without such great stress upon the special soil each might thrive best in. Absolutely perfect drainage, proper Winter protection, and the gentle slope of the area planted have been of prime importance in producing the perfect plants.

The stock of some varieties is extremely limited and orders will be filled in rotation.

Designs and Planting Plans will be furnished, and the construction of Rock and Wall Gardens personally supervised. A list of plants for the beginner will be sent on request, and any other information desired.

MRS. B. HAMMOND TRACY
